I agree but would only to the address bollards in conjunction with Ellisville doing them as well. I do not see a benefit for having them only in Ballwin.

I would like to put this on the next agenda to see if the Board is interested in moving forward. We have a \$25,000 contingency but otherwise it is unbudgeted.

According to this email from Krupp, they will provide and install the bollards for a price of \$3735 each. At 15 units this comes to \$56025 for Ballwin's 15 bollards. Actually I think the plans are missing 1 bollard so maybe the price would be \$59,760.
